STRATA...

Form, function and value

Easy Configuration and Expansion

Strata's building block design allows limitless layout possibilities, including the unique opportunity to place 24" and 48" upper modules independently at any position over a 72" lower module. A configuration can even end on a corner! Also, to support a migration to LCD flat panel monitors Strata can be specified as reduced depth, or easily converted on location.

Added Flexibility

In addition to accommodating depth requirements, Strata is designed to change from an enclosed layout to an open slat wall, or vice versa. The only console of its kind and capability, Strata can easily incorporate both types of layouts as well as a desktop application in one console.

STRATA KEY FEATURES & BENEFITS

- Added Strength**
 Sheet metal stringers, coupled with structural polymer cladding provide incredible strength and durability.
- Simple Equipment and Cable Access**
 Unlimited front and back access is achieved through hinged doors, gas piston assisted hoods, or removable equipment fronts. All processor shelves and equipment fronts (such as telephone trays or binder / paper storage kits) mount with a quick release design for easy removal and reconfiguration. Raceways built into the lateral structure with multiple access ports allow for effective cable management.
- Effective Task Lighting**
 Utilizing a mechanical grid slide plate to adjust brightness, Strata's task lighting significantly maximizes bulb life, compared to a conventional dimmer switch system.
- Unique Aesthetic Look**
 Strata has a contemporary appeal, with cutting-edge cladding design and color options, a molded contour worksurface edging, and technology responsive modules.

TECHNICAL INFORMATION

Dimensions

- Full-depth console: 48" (1219 mm)
- Reduced-depth console: 37" (940 mm)
- Console height: 47" (1194 mm)
- Worksurface height: 28.5" (724 mm)

Note: All measurements are to curved portion of panel.

Monitor Space

- Full depth fits most 21" (533 mm) monitors
- Height from monitor shelf in lowest position to underside of valance = 20.75" (527 mm) (also max. space for monitor front loading)
- Reduced depth will fit most 21" (533 mm) flat panel LCD monitors

Processor Height

- Max. processor height on fixed shelf = 19.75" (502 mm)
- Max. processor height on adjustable shelf = 19.25" (489 mm)

Processor Depth

Full-depth console

- Max. processor depth = 22.25" (565 mm) per fixed shelf
- Max. processor depth = 17.75" (450 mm) per adjustable shelf
- Max. processor width = 17.50" (445 mm) per fixed shelf
- Max. processor width = 16.0" (406 mm) per adjustable shelf

Reduced-depth console

- Max. processor width = 11.25" (286 mm)
- Max. processor depth = 18.50" (470 mm) (on fixed shelf/rackmount base)
- Max. processor depth = 17.75" (450 mm) on swing-out shelf
- Max. processor width = 8.50" (215 mm) on swing-out shelf
- Max. processor height = 19.50" (495 mm) on swing-out shelf

Rackmount Space (std 19" - 483 mm rackmount)

- Equipment front = 8 RU (14" - 356 mm)
- Lower = 9 RU (15.75" - 400 mm)
- Distance between rails for 4 pt rackmount (full-depth console) is 17.75" (450 mm)
